Cockpit Enclosure For Bell 206, 58A, 58D Kiowa

The **REALSIMS Bell 206 Helicopter Cockpit Enclosure** - is a full size replication of the Bell Textron 206 . This enclosure can be configured to any desired fidelity using modular FasTrac Reconfigurable Instrument Consoles, Seats, Flight Control Packages and Visual Display System Options found on our website at www.HeloSims.com.

The cockpit enclosure can be populated with either Analog or Virtual Instruments, NAVCOM and switch panels to accurately replicate any variant of the Bell 206 including : Jet Ranger, Long Ranger, OH58A and the latest variant of the US Army's OH58D Kiowa. Other helicopter and fixed wing enclosures are available upon request.

All RealSims cockpit enclosures are constructed of multiple layers of fiberglass over a rigid steel frame that surrounds the crew cab. Steel reinforcement deck plates provide stability and serve as a solid surface for mounting the enclosure a stationary platform. The standard enclosure is not recommended for use with a motion platform. Motion Platform enclosures are also available. These are specially constructed to withstand the stress and torque associated with motion simulated flight.

Chin Bubble and Rotor Access windows can be cut out on request for use with multi-channel visual systems where chin, cheek and overhead views are required.

The standard enclosure is finished with a high gloss automotive quality black paint with multiple coats of Duralite clear coat finish. Standard colors are : Black, White, Army Drab Green, and Navy Gray. Custom paint schemes and transparent decal's are available to finish off the enclosure. The exterior of the enclosure is of show quality, the interior is unfinished but we can optionally finish the interior with carpet and other trim work to suite you needs at your request.

RealSims is committed to driving the high costs of simulators and flight training devices down by providing high quality Re-Configurable, Commercial Off The Shelf (COTS) products at affordable levels.
