

It begins with a commitment and dedication to detail - from craftsmen and designers with years of experience supported by state-of-the-art equipment, tooling and machinery. This is followed by a meticulous quality assurance process used to insure that compliance to design specifications are met or exceeded along each step of the manufacturing process. The end result is a high quality product that will withstand years of use in the most demanding environments.

RealSims Products - are designed to meet the rigors of military use, we know and understand that our products may be deployed and shipped anywhere in the world at a moments notice, this means that mobility and durability is paramount. Our products are conceived and manufactured with the following goals and objective in mind:

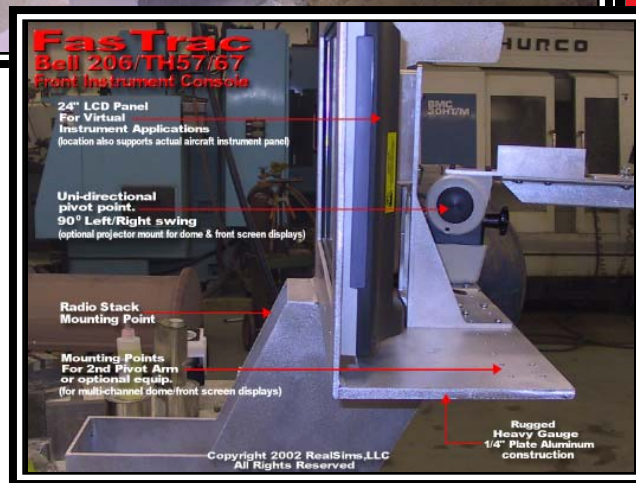

- Comply and Adhere to Strict Design Specifications
- Use Quality Material & Experienced Craftsmanship
- Build in Modularity and Flexibility to Meet a Broad Range of Requirements and Applications
- Build in Diversity to Extend The Products Life Cycle

FasTrac - is the only general purpose re-configurable simulator on the market providing the capability to transform between any aircraft (rotary fixed wing or ground vehicle, by swapping "Drop IN" modular consoles using our patent pending **GRID TEMPLATE MOUNTING** system. Precision cockpit overlay templates are provided containing knockouts for interior components (seats, controls etc) making re-configurability a snap. Cockpit layout templates are available for just about any helo, fast jet or heavy aircraft, if the template is not available we'll make it. Various fidelity flight control packages, motion platforms and display enclosure systems can be easily integrated to the platform.

The Power To Change - Diversity is a fundamental requirement of a business investment portfolio. The diversity of the hardware and software platforms you select should be just as important as the diversity of your financial portfolio. Bad decisions on the part of your simulator investment can cost your company dearly if your training needs change in the future. You should be able to re-use the majority of the major system components for as long as possible.

RealSims has gone to great lengths to insure that your FasTrac investment is sound, and that you will get several years of use from it. Simply put, this product will not become obsolete should your training needs change. We designed FasTrac to be a **TOTALLY hardware, software and vehicle independent system**. We've also made it flexible with the power to grow and transform as your future needs surely will. FasTrac will meet or exceed your expectations, and it's available as an OEM product if your company is interested in sourcing the technology from us to do your own integration. If you desire, we can deliver a fully functional simulation environment complete with off the shelf or custom databases, integrated host environment and a display system ready to fly. We offer a number of hemispherical domes ranging from 2 to 5 meters in size as well as high fidelity multi channel front projection screens and large format (up to 90" Diagonal) display cubes using short throw projection systems to fit in space challenged environments.

Give us a call today, we know how much Quality and Diversity mean to you and we won't disappoint you.
